Fireproof Safes 3
Fireproofness of safes

The real and functional fire resistance of safes is one that is confirmed by certificates and appropriate tests. According to European requirements the tests, surveys and certification of fire resistance of safes are carried out in accordance with two standards: EN 1047-1 and EN 15659.

Fire resistance is the ability of safes to meet certain requirements during a fire. The measure of the fire resistance of safes is the time expressed in minutes, in a simplified way illustrating how long a given safe can protect its contents from extremely severe conditions during a fire and fire action.

The abbreviation P and DIS stands for: P - paper, assuming that the maximum temperature at which the documents retain their properties is 170° C; DIS - data carriers - which are destroyed at temperatures above 50° C.

### Standard EN 1047-1

- **S 60 P**
- **S 120 P**

### Standard EN 15659

- **LFS 30 P**
- **LFS 60 P**

The abbreviation P and DIS stands for: P - paper, assuming that the maximum temperature at which the documents retain their properties is 170° C; DIS - data carriers - which are destroyed at temperatures above 50° C.

**Standard EN 15659**

The light fire resistance defined by the classes LFS 30 P and LFS 60 P according to the EN 15659 standard provides the stored property with short-term fire protection - 30 and 60 minutes respectively.

In the case of a fire test (EN 15659) safes are heated in furnace according to temperature curve up to 840° C, respectively in period 30 (LFS30P) and 60 (LFS60P) minutes. This standard doesn't require a drop test and the temperature inside the safe during cooling is not tested.

It can be said that this is half of the test to which safes are subjected according to the requirements of EN 1047-1.

**Standard EN 1047-1**

That’s why we can talk about “real” fire resistance when products are subjected to tests based on a more restrictive standard, which is the EN 1047-1.

Its requirements determine not only the maximum temperature increase inside the safe during heating but also during cooling, additionally also in case of data carrier safes they determine the maximum humidity inside the safe.

The safe is placed inside the furnace and is heated together with furnace to temperature 1090° C at time 60 (class 560P) or 120 (class 120P) minutes.
respectively. At the same time the temperature is measured in critical places inside the safe.

In case of safes with fire resistance "P", the acceptable temperature increase inside the safe is by 150° C, "DIS" by 30° C.

The next point is the cooling phase, which is completed when temperature inside the safe is completed on all the sensors.

The EN 1047-1 standard also requires a positive passing of drop test, which is a simulation of roofs getting caught in fires.

We should remember that fireproof safes, except for high temperatures, are exposed to flooding in the process of firefighting. The short-term protection for this type of threat is a gasket system which, under the influence of high temperatures, seals the safe door.

However, let us keep in mind that fireproof safes are not waterproof ones at the same time.

In conclusion, the EN 1047-1 standard assumes:
• heating the safe together with furnace up to 1090° C,
• measuring temperature inside the safe in critical places during heating and cooling, which can be up to 24 hours,
• drop safe from a height of 9 meters,
• in case of safes for storage data carrier - maximum humidity inside the safe up to 85%.

The EN 15659 standard assumes:
• heating the safe together with furnace to temperature 840° C,
• measuring temperature inside the safe in critical places only during heating.

Model Solingen

Security level: Class S2 according to EN 14450 / VdS 2862
Fire rating: Fire-protected safes according to EN 1047-1 S 60 P

The safe has been approved in accordance with EN 1047-1 in fire class 60 P. The certification was awarded by VdS they have fire and impact tests.

Suitable for the storage of: office documents, office equipment

Description
Series Solingen - the safes with one hour protection from fire S 60 P.

Body: double-walled body (50 mm thick)
Door: multi-walled door construction (95 mm thick)
Locking: 4-way locking bolt system - incl. fix bolts on the hinge side

Standard option
Lock: high security key lock I class VdS with two keys (120 mm)
Boltwork handle: handle, protruding 60 mm
Hinges: external
Door opening angle: 180°
Mounting holes: 2 holes in the floor
Colour: RAL 7035 (light grey)
