Siegen SG1 model - prepared for the storage of small arms with dimensions of max. **220 mm high, 105 mm wide**. Available in both **electronic and biometric lock** versions.

The model with a biometric lock requires an external power supply. The cable outlet is located in the rear wall.

Quick access to the weapon via **automatic drawer ejection** after entering the lock code (art. 58900.12) or fingerprint reading (art.58900.17).

The new Siegen SG1 model combines modern design as well as functionality. The lock as well as the battery box are levelled with the upper body of the safe.

The interior features a foam holder with space to store one weapon and an ammunition magazine. The foam holder made of high-density material provides a high level of protection for the deposited weapon.

The ergonomic design of the safe as well as the foam allows the weapon to be placed in a position ready for quick access.

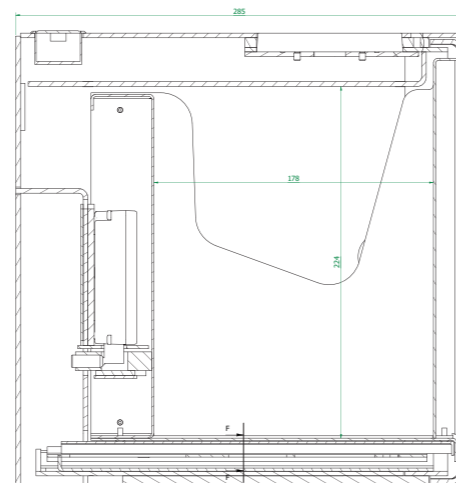

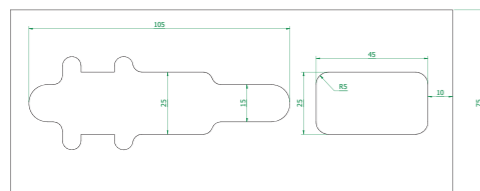

There are used heavy-duty telescopic slides, with a locking device to prevent over-extension of the drawer.

Through the positioning of the mounting holes in the right and left walls - can be installed according to individual requirements. The safe is supplied with plugs for the side mounting holes.

13 kg

Low weight enables the package delivery **up to 30kg**
